Firmware wireless module version

Content

Wireless module settings

Introduction

Wireless barcode scanner transfers the data to computer via receiver.

If scanner & receiver need to re-pair, scan the “Pairing Function".

LED Description

Indicator Description

Indicator Type	Details Description
Battery 	Four bars, charging flash
Wireless status 	Bluetooth/2.4G connection
Pairing 	Bluetooth/2.4G quick flash
Scanner ring light 	One flash for one successful scanning Slow flash for pairing mode
Base ring light 	One flash for one successful data transferring Slow flash for pairing mode

Buzzer Description

Voice Type	Details Description
One medium long high voice	Successful pairing
One long and three short voice	Back from sleep
One short and long voice (Prompt, Successful)	Successfully reading code
Three continuous short voice	Alarm prompt

CCD module Default Settings

Scanning the below barcode can restore the CCD module scanner the default.

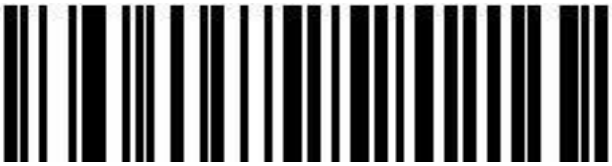
Restore default CCD module

Wireless module Default Setting

Default setting for wireless module

Scanning the below barcode can restore the wireless module scanner the default.

Firmware Version CCD module.



Firmware CCD module version

Firmware Version wireless module

Firmware wireless module version

Battery Display

Display battery capacity

Note: Percentage display

USB cable Output Mode

USB priority output (Default)

If a USB cable is connected to the reader, data will only be sent via this port.

Output simultaneously USB and wireless

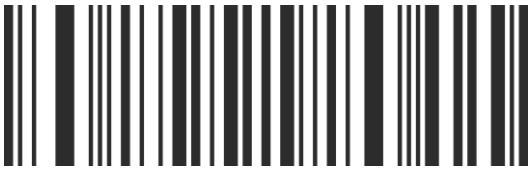
Note: USB and 2.4G or Bluetooth output at the same time (depending on the communication mode), in which 2.4g or Bluetooth output is unsuccessful, alarm will be given.

Data Transfer Mode

Immediate (Default)

Automatic Storage

Note: Automatic storage mode. Data is automatically saved in scanner when exceed communication distance, scan the "Upload all data" code to complete the data transfer.



Memory

Note: Memory mode, the scanned barcode will be automatically saved in scanner. If the data need to be viewed or uploaded, then scan the “Upload all data” code to complete the data transfer.

Memory mode

Upload all data

Clear all data

Upload and clear all data
(from wireless module firmware HW:VN(XLDZ)=03.70)

Note: Clear all data can be effective under Memory mode & Automatic Storage mode.

Display stored data

USB Interface Type

USB-HID (Default)

USB-COM
(For old OS Driver is needed for USB Virtual Com Port)

Wireless Setting

2.4 Ghz (Default)

Bluetooth HID Mode

Bluetooth SPP Mode

Note: Scan the Bluetooth code change to Bluetooth mode. When the scanner is restored, for Bluetooth mode scan the code again.

In Bluetooth SPP Mode recommended set Never Sleep.

Bluetooth HID transmission rate

Fast

Medium (Default)

Low

IOS show/hide the Keyboard

(Under Bluetooth mode)

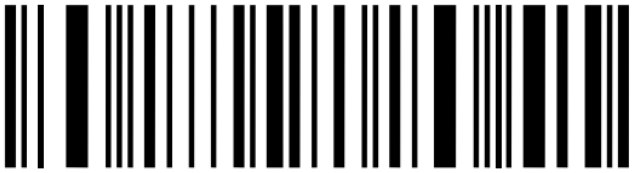
Show or Hide

Pairing Function

2.4G Receiver Pairing

Note: Scan this code, scanner will enter the automatic pairing mode for 1 minute, then re-insert the receiver. There will be a sound heard when pairing successfully.

For Bluetooth pairing setting, search by Bluetooth device.

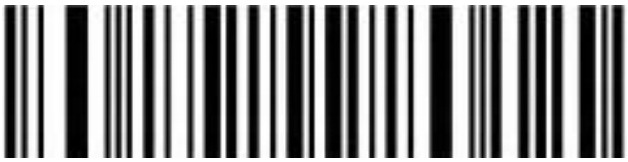


Bluetooth HID Pairing

Scan the “Bluetooth HID Pairing” barcode, the scanner is ready to be connected by other bluetooth devices.

Sleeping Settings

Different Sleeping time choices:



Never Sleep

10s

30s

1min

2min

5min (Default)

10min

30min

Immediate sleep – Sleep Now

Keyboard Language Settings

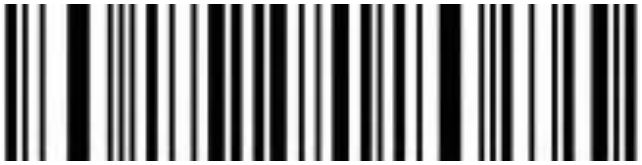
USB-HID Data type

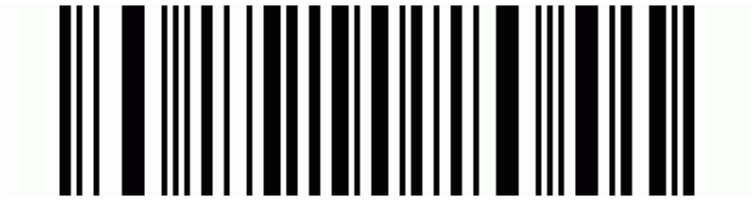


Keyboard function key (Default)

ALT Mode ON -Universal language

ALT Mode must be set for send low ASCII chars like ETX, STX, LF …

UTF-8 chars Keyboard Conversion



UTF-8 keyboards conversion

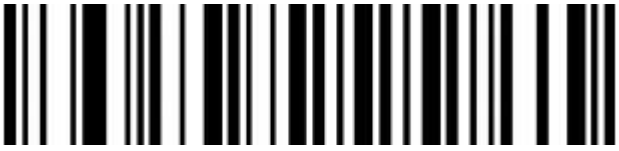
This feature works only in ALT mode.

GS (group separator) Control

Control Character Output for GS Control

This setting is for CCD module only, not for wireless module.l

Disable (Default)



Enable

GS (group separator) character conversion

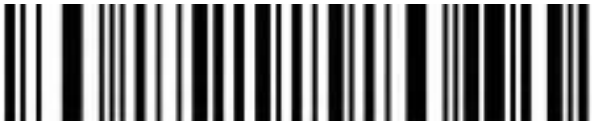
None (Default)

In ALT mode transfer GS like CTRL+] (terminal emulation keys).

GS convert to <GS>

GS convert to |

GS convert to]



GS convert to ^]

Letter case conversion

Normal Letter Case (Default)

All Uppercase

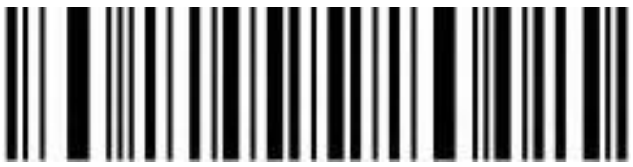
All Lowercase

Case Inversion

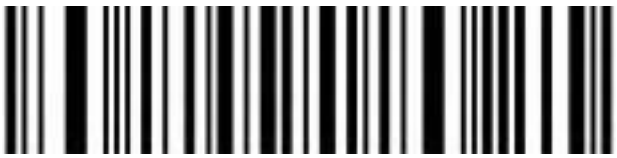
Data Edit

Data sending in this format [Prefix][CodeID][Data][Suffix][Terminator]

Terminator character



None



Enter (Default)

Tab

Add Prefix and Suffix Settings

You can add characters to the front and back of the read data.

The syntax for adding is:

1. Read settings code Add Prefix or Add Suffix

Add Prefix Setting

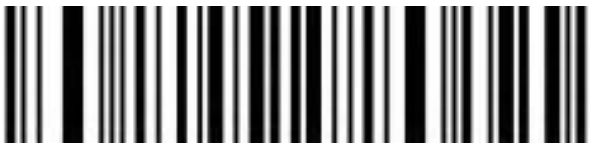
Add Suffix Setting

2. Choose the location from which you want the characters will be added. If you want to add from the first or last position, select 0 1. Perform by reading the appropriate codes corresponding to the numbers in the Appendix - Data Code Table. It is necessary to always read two numbers! The difference between a Prefix and a Suffix is in which side you count the characters from. Prefix - front / Suffix - back.

3. In the Appendix, find the appropriate codes (Tables ASCII Code Table, Function and special keys, Ctrl, Alt, GUI keys) for the characters or keystrokes you want to add. And you will gradually read them with a reader.

4. At the end save your settings, reading the code and Saved Finished Set.

Finished Set for Data Edit



Saved and Finished Set

If you want to clear the settings, follow steps 1 and 4 only.

Note: For a better explanation, look at the examples in the Appendix.

Hidden Character Settings

You can cut-hide characters in retrieved data. You can cut from the front or back.

The syntax for hide is:

1. Read settings code Hide front or Hide back character

Hide front character

Hide back character

2. Select the location from which you want to hide the characters. If you want to hide from the first or last position, select 0 1. Perform by reading the appropriate codes corresponding to the numbers in the Appendix - Data Code Table. It is necessary to always read two numbers!
   The difference between a Hide front and a Hide back is in which side you count the characters from.

3. Now select how many characters you want to hide. Again, select two numbers from the table in the appendix, similar to point 2.

4. At the end save your settings, reading the code and Saved Finished Set.

Finished Set for Data Edit

Saved and Finished Set

If you want to clear the settings, follow steps 1 and 4 only.

Note: For a better explanation, look at the examples in the Appendix.

Data editing

The Data editing function can customize the barcode content into the three fields of Start/Center/End by configuring the Start/End field length. Please configure the length of the Start/End field and the transport configuration according to the actual needs.

Note: Custom pre-suffix, start, end, CODE ID, AIM ID and other non-barcode content will not be affected by the data editing function.

Transmission configuration

Transfer the full Data field

Only transfer the Start field

Only transfer the Center field

Only transfer the End field

Field Length Configuration

Set Start field length

Set End field length

Scan Mode

Auto Sense Mode off

Decoding by pulling the trigger of the scanner when auto sense mode is off. It's default mode.

Off（Default）

Auto Sense Mode on

The scanner can sense barcode for decoding automatically.

On

Repeat Barcode Detection

Use for decode same barcode of interval time, it will decode only one time if not exceeded set time.

500ms

750ms（Default）

Example for user-defined prefix and suffix:

Example 1.1:

Set ”XYZ” to the second position in the codes.

For example data in code is: 1234567890 - And it should look like this: 1**XYZ**234567890

1. Read code from Add Prefix

Add Prefix Setting

2. Add to the second position, select two number from Appendix - Data Code Table - reading the appropriate codes corresponding to the numbers -> **0** and **2**.

0

2

3. In the Appendix, find the appropriate codes for chars X Y Z (Tables ASCII Code Table) to add. And you will gradually read them with a reader. **X** and **Y** and **Z**.

X

Y

Z

4. Save this settings reading code **Saved and Finished Set**.

Saved and Finished Set

Example 1.2:

Set two **Arrow Down** as last keystroke (remember that the last character is a terminator-CR).

1. Read code from Add Prefix

Add Suffix Setting

2. Add to the last position, select two number from Appendix - Data Code Table - reading the appropriate codes corresponding to the numbers-> **0** and **1**.

0

1

3. In the Appendix, find the appropriate codes for Arrows Down (Function and special keys Tables) to add. And you will gradually read them with a reader. **Arrows down .**

DownArrow

DownArrow

4. Save this settings reading code **Saved and Finished Set**.

Saved and Finished Set

Example for Hidden Character Settings

Hide two chars from second position.

For example data in code is: 1234567890 - And it should look like this: 14567890

1. Read settings code Hide front character

Hide front character

2. Select second position select two number from Appendix - Data Code Table - reading the appropriate codes corresponding to the numbers -> **0** and **2**.

0

2

3. Now select how many characters you want to hide. Again, select two numbers from the table in the appendix, similar to point 2. -> **0** and **2**.

0

2

4. Save this settings reading code **Saved and Finished Set**.

Saved and Finished Set

Example for barcode length range configuration

Please sure it not bigger than current maximum length range when set up minimum length. Otherwise, it will show error. In the same way, must be make sure it's not smaller than current minimum length range when set up maximum length. Please for numbers and Save settings code only for Appendix ***Table of numbers for barcode length range configuration***!!!

Example 2.1:

Set Code 128 length range is 4-12bit

Step: Set "Code 128 Minimum (0~50bit)"; Set "4"; Set "Save"

Set "Code 128 Maximum (0+-50bit)"; Set "1" "2"; Set "Save"

Example 2.2:

Set Interleaved 2 of 5 length is 14bit
It can set up by "ITF25 14bit", through barcode length range of Maximum /Minimum to set,too.
Step: Set "Interleave 2 of 5 Minimum (0~50bit)"; Set "1" "4"; Set "Save" Set "Interleave 2 of 5 Maximum (0+50bit)"; Set "1" "4"; Set "Save"

Example 2.3:

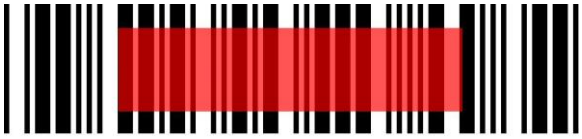
Set Code 39 length is random length
Step: Set "Code 39 Minimum (0~50bit)"; Set "0"; Set "Save"
Set "Code 39 Maximum (0+50bit)"; Set "0"; Set "Save"

Read Skills

To get a good reading performance, a beam of aim light from scanner should be aimed at the centre of barcode, support to aim in any directions for read convenient, too.

More nearly barcode, the beam of aim light is smaller; More further barcode, the beam of aim light bigger. For reading barcode correctly, if barcode small, the scanner should be close to barcode, if barcode big, the scanner should be farther to barcode.

If the barcode is highly reflective (for example: coated surface), please adjust the scanner angle to read it successfully.



Safety

Please not direct aim eye when the scanner has a strong ray of light, to avoid causing any hurt or unwell.
